

Bacterial Spot

⚠ Note : Our AI helps quickly identify plant diseases, but it isn't 100% accurate. Results depend heavily on image quality—blurry photos can confuse the model. Always verify the final diagnosis with a qualified plant expert..

About disease and the symptoms

Bacterial spot is a common plant disease caused by several types of bacteria, most commonly belonging to the *Xanthomonas* or *Pseudomonas* genera. These bacteria can enter the plant through natural openings in the leaves or through small wounds caused by insects, wind, or other damage. The disease is favored by warm, wet, and humid conditions and can spread through rain, water splashes, overhead irrigation, contaminated tools, and contact with infected plants.

If you suspect bacterial spot, examine the leaves carefully for changes in their appearance.

Early Stages: It usually starts as tiny, water-soaked spots on the underside of the leaves. They almost look like little greasy or wet patches if you hold them up to the light.

Color Changes: As the disease progresses, these spots darken, turning dark brown or black.

The Yellow Halo: One of the most classic and recognizable signs of a bacterial infection is a distinct yellow ring or 'halo' surrounding the dark center of the spot.

Leaf Damage: Over time, the spots can merge together. This causes the surrounding leaf tissue to die, turn completely yellow, and eventually drop off the plant.

Treatment

Treating bacterial leaf spot is mostly about stopping the spread, as there's unfortunately no cure for leaves that are already infected. To help your plant bounce back, immediately remove and destroy any diseased leaves or badly affected plants—just be sure not to compost them! Next, keep the remaining foliage as dry as possible by watering at the base instead of using overhead sprinklers, and ensure good air circulation by pruning or spacing your plants out. If you want an extra layer of protection, you can apply a copper-based fungicide, which acts like a protective shield for the remaining healthy leaves.
